

**Connecting data. Revealing insight.
Enabling better decisions.**

OneView is a data and intelligence platform designed specifically for local government and the wider public sector. It brings together information from across organisations to create a trusted, joined-up understanding of residents, places and services.

By connecting data that already exists across councils, health, housing and partner organisations, OneView helps teams identify people who need support earlier, target interventions more effectively and measure the impact of every decision.

Rather than replacing existing systems, OneView works alongside them—providing the intelligence layer that enables organisations to move from reactive services to proactive prevention.

From data integration and identity resolution through to predictive analytics, case summaries, dashboards and AI-assisted insight, OneView gives organisations the confidence to make evidence-led decisions that improve outcomes while making better use of limited resources.

Impact

OneView helps organisations:

- identify vulnerable residents earlier
- improve targeting of preventative services
- reduce avoidable demand across multiple services
- increase confidence in operational and strategic decisions
- maximise value from existing data investments
- strengthen multi-agency collaboration
- demonstrate measurable outcomes and return on investment.

Case study

Across more than twenty local authorities and Integrated Care Systems, OneView is helping organisations tackle some of the UK's most complex public service challenges.

The platform has been used to support:

- preventing homelessness before crisis occurs
- identifying residents at risk of falls and avoidable hospital admissions
- supporting unpaid carers before breakdown
- improving hospital discharge and intermediate care
- identifying vulnerable households through linked intelligence
- reducing domestic abuse risk through earlier intervention
- improving targeting of children's and family services

Every implementation starts with local priorities, using existing data to generate practical intelligence that frontline teams can act upon immediately.

“OneView has been proven to deliver immediate benefits to the client group with tangible examples of families who without the support they are now receiving were on a trajectory to presenting as homeless in the near future and who otherwise may not have come to our attention until a point which was too late for a successful intervention.”

John Littlemore, Head of Housing and Community Services, MBC

About Newton

Resident centric | Connected | Financially sustainable

We partner with local authorities to improve and innovate public services, so that people and families thrive in their communities.

The quantum, scale, and complexity of change and reform in public services continues to grow.

As a strategic delivery partner, we help:

- define and deliver improvement activity to move towards financial sustainability at pace.
- set the digital and operating model foundations for innovation.
- leaders shape and deliver their ambitions for place.

Together, we transform across organisations, systems, and places to deliver resident centric, connected, and financially resilient public services.

We're committed to being excellent value for the public purse, as demonstrated by our 100% implementation fee guarantee.
